

**Name: Aditi Kohale**

**Course: C, DSA and C++**

**Topic: Linked List – Assignment 2**

**Q. Find the first occurrence of a number:**

**Code:**

```
#include<stdio.h>
```

```
#include<stdlib.h>
```

```
struct Demo
```

```
{
```

```
    int data;
```

```
    struct Demo *next;
```

```
};
```

```
struct Demo *head=NULL;
```

```
int first_occurrence(int num)
```

```
{
```

```
    if(head==NULL)
```

```
    {
```

```
        return -1;
```

```
    }
```

```
    else
```

```
    {
```

```
        int count=0;
```

```
        int flag=0;
```

```
        struct Demo *temp=head;
```

```

        while(temp!=NULL)
        {
            count++;
            if(temp->data==num)
            {
                flag=1;
                break;
            }
            temp=temp->next;
        }
        if(flag==0)
        {
            return -1;
        }
        else
        {
            return count;
        }
    }
}

```

```

void printLL()
{
    printf("The Linked list is:\n");
    struct Demo *temp=head;
    while(temp!=NULL)
    {
        printf("%d->",temp->data);
        temp=temp->next;
    }
}

```

```
    }  
    printf("\n");  
}
```

```
struct Demo *createNode()  
{  
    struct Demo *newNode=(struct Demo*)malloc(sizeof(struct Demo));  
    printf("Enter data:\n");  
    scanf("%d",&newNode->data);  
    newNode->next=NULL;  
    return newNode;  
}
```

```
void addNode()  
{  
    struct Demo *newNode=createNode();  
    if(head==NULL)  
    {  
        head=newNode;  
    }  
    else  
    {  
        struct Demo *temp=head;  
        while(temp->next!=NULL)  
        {  
            temp=temp->next;  
        }  
        temp->next=newNode;  
    }  
}
```

```

    }
}

void main()
{
    int count;

    printf("Enter the no. of nodes:\n");

    scanf("%d",&count);

    for(int i=1;i<=count;i++)
    {
        addNode();
    }

    printLL();

    int num;

    printf("Enter the data you want to search:\n");

    scanf("%d",&num);

    int occ=first_occurrence(num);

    printf("The first occurrence of the number %d is at the index %d\n",num,occ);

}

```

## Output:

```

aditi@DESKTOP-ANL3TOH:/mnt/d/Core2Web/LL2$ cc ques1.c
aditi@DESKTOP-ANL3TOH:/mnt/d/Core2Web/LL2$ ./a.out
Enter the no. of nodes:
7
Enter data:
10
Enter data:
20
Enter data:
30

```

## Q.2. To find the second last occurrence of the number:

### Code:

```
#include<stdio.h>

#include<stdlib.h>

struct Demo
{
    int data;
    struct Demo *next;
};

struct Demo *head=NULL;

void secondLast_occ(int num)
{
    if(head==NULL)
    {
        printf("Linked list empty\n");
    }
    else
    {
        struct Demo *temp=head;
        int count=1;
        int last=-1;
        int secondLast=-1;
        while(temp!=NULL)
        {
            if(temp->data==num)
```

```

        {
            secondLast=last;
            last=count;
        }
        temp=temp->next;
        count++;
    }
    if(secondLast!=-1)
    {
        printf("The second last occurrence of %d is found at %d\n",num,secondLast);
    }
    else if(last!=-1)
    {
        printf("Not second last but last occurrence of %d was found at %d\n",num,last);
    }
    else
    {
        printf("No occurrence found\n");
    }
}
}

```

void printLL()

```

{
    printf("The Linked list is:\n");
    struct Demo *temp=head;
    while(temp!=NULL)
    {
        printf("%d->",temp->data);
    }
}

```

```
        temp=temp->next;
    }
    printf("\n");
}
```

```
struct Demo *createNode()
{
    struct Demo *newNode=(struct Demo*)malloc(sizeof(struct Demo));
    printf("Enter data:\n");
    scanf("%d",&newNode->data);
    newNode->next=NULL;
    return newNode;
}
```

```
void addNode()
{
    struct Demo *newNode=createNode();

### Q.3. WAP that searches the occurrences of the data in the linked list:

#### Code:

```
#include<stdio.h>
```

```
#include<stdlib.h>
```

```
struct Demo
```

```
{
```

```
    int data;
```

```
    struct Demo *next;
```

```
};
```

```
struct Demo *head=NULL;
```

```
int occurrence(int num)
```

```
{
```

```
    if(head==NULL)
```

```
    {
```

```

        return -1;
    }
    else
    {
        int count=0;
        int flag=0;
        struct Demo *temp=head;
        while(temp!=NULL)
        {
            if(temp->data==num)
            {
                count++;
                flag=1;
            }
            temp=temp->next;
        }
        if(flag==0)
        {
            return -1;
        }
        else
        {
            return count;
        }
    }
}

```

```

void printLL()

```

```

{

```

```
printf("The Linked list is:\n");  
struct Demo *temp=head;  
while(temp!=NULL)  
{  
    printf("%d->",temp->data);  
    temp=temp->next;  
}  
printf("\n");  
}
```

```
struct Demo *createNode()  
{  
    struct Demo *newNode=(struct Demo*)malloc(sizeof(struct Demo));  
    printf("Enter data:\n");  
    scanf("%d",&newNode->data);  
    newNode->next=NULL;  
    return newNode;  
}
```

```
void addNode()  
{  
    struct Demo *newNode=createNode();  
    if(head==NULL)  
    {  
        head=newNode;  
    }  
    else  
    {
```

```

        struct Demo *temp=head;
        while(temp->next!=NULL)
        {
            temp=temp->next;
        }
        temp->next=newNode;
    }
}

void main()
{
    int count;
    printf("Enter the no. of nodes:\n");
    scanf("%d",&count);

    for(int i=1;i<=count;i++)
    {
        addNode();
    }
    printLL();
    int num;
    printf("Enter the data you want to search:\n");
    scanf("%d",&num);
    int occ=occurence(num);
    printf("There are %d occurrences of the number %d\n",occ,num);

}

```

**Output:**

```

aditi@DESKTOP-ANL3TOH:/mnt/d/Core2Web/LL2$ vim ques3.c

### Q.7. Reverse the data elements in the above example:

#### Code:

```
#include<stdio.h>
```

```
#include<stdlib.h>
```

```
#include<string.h>
```

```
struct node
```

```
{
```

```
    char str[20];
```

```
    struct node *next;
```

```
};
```

```
struct node *head=NULL;
```

```
int mystrlen(char *str)
```

```
{
```

```
    int len=0;
```

```
    while(*str!='\0')
```

```
    {
```

```
        len++;
```

```
        str++;
```

```
    }
```
